High School Intervention for Influenza Biology and Epidemics/Pandemics: Impact on Conceptual Understanding among Adolescents

Nancy Dumais and Abdelkrim Hasni62-71

Evaluation of the Redesign of an Undergraduate Cell Biology Course

Laura April McEwen, dik Harris, Richard F. Schmid, Jackie Vogel, Tamara Western, and Paul Harrison72-78

Stem Cells and Society: An Undergraduate Course Exploring the Intersections among Science, Religion, and Law

Chris Pierret and Patricia Friedrichsen79-87

On the Cover

Cover shows a hand-held physical model of a heterotrimeric G-protein, made from coordinates in the Protein Data Bank. The G α subunit is shown in white, the G β subunit in blue, and the G γ subunit in yellow. The bound GDP is not visible in the picture angle shown. In the article on p. 29, Harris *et al.* demonstrate the learning value of such models in conjunction with 2D computer representations from a molecular imaging program in helping students understand the 3D protein structure-function relationships.
