# **Supplemental Materials**

Schinske *et al.*, 2016. Scientist Spotlight Homework Assignments Shift Students' Stereotypes of Scientists and Enhance Science Identity in a Diverse Introductory Science Class

## **Table of Contents**

<b>Part A</b> List of Individuals Featured in Scientist Spotlight Assignments	<b>p. 1</b>
<b>Part B</b> Sample Course Reader Homework Assignment	<b>p. 2</b>
<b>Part C</b> Table of Student Demographic Characteristics	<b>p. 3</b>
<b>Part D</b> Quantitative Web Survey Items	<b>p. 4-6</b>
<b>Part E</b> Descriptive Statistics Listed by Hypothesis & Figure Number	<b>p. 7-9</b>
<b>Part F</b> ANCOVA Tables Following Quantitative Analyses	<b>p. 10-11</b>
<b>Part G</b> SALG Item Factor Analysis Methods	<b>p. 12</b>
<b>Part H</b> Quantitative Survey Items Constituting the "Science Interest" Scale	<b>p. 13</b>
<b>Part I</b> Word Clouds Depicting Students' Descriptions of Scientists at Three Time Points	<b>p. 14-17</b>

## List of Individuals Featured In Scientist Spotlight Assignments

### Week 2

Charles Limb – Neuroscientist

### Week 3

Ben Barres – Neuroscientist

Dorit Ron – Neuroscientist

### Week 4

Erwin Chargaff – Biochemist

Francis Crick – Molecular Biologist

Rosalind Franklin – Chemist

James Watson – Molecular Biologist

Maurice Wilkins – Physicist and Molecular Biologist

### Week 5

Agnes Day – Microbiologist and Cancer Researcher

### Week 6

Raymond Dubois – Cancer Researcher

### Week 7

Lawrence David – Microbiologist

### Week 8

Thumbi Ndung'u – HIV/AIDS Researcher

### Week 9

Flossie Wong-Staal – Virologist and Molecular Biologist

Juan Perilla – Biophysicist

### Week 10

Min Chueh Chang – Reproductive Biologist

Carl Djerassi – Chemist

Luis Miramontes – Chemist

Gregory Pincus – Reproductive Biologist

Edris Rice-Wray – Reproductive Health Researcher

### Week 11

Darlene Cavalier – Citizen Scientist

### Reading Reflection Assignment #3

Read the article, titled *Cancer's Random Assault*, by Denise Grady (New York Times, January 5, 2015) found on pages 1-3 of your course reader. As you read, annotate (i.e., underline, note in margins) to identify:

#### Evidence

Information you think might be important to understand or consider more closely later

#### Interpretations & Difficulties

Your opinions or curiosities

Roadblocks or difficulties you had while reading

Once you finish, write 350 words or more summarizing your Evidence and Interpretations & Difficulties surrounding this article.

Supplemental Table 1

Racial (a) and Gender (b) Identities of Students in Scientist Spotlight Homework  
and Course Reader Homework Classes

a)

<b>Racial/Ethnic Identities</b>	<b>Scientist Spotlight Homework Classes</b>	<b>Course Reader Homework Classes</b>
Latina/o	22%	27%
White	21%	16%
Vietnamese	9%	10%
Filipina/o or Pacific Islander	9%	4%
Chinese	8%	8%
Asian	5%	6%
Korean	3%	4%
Black	3%	3%
Indian (Asia)	3%	2%
Persian	2%	2%
Indonesian	0.6%	3%
Japanese	0.3%	2%
Others	2%	4%
Multiple Races	11%	10%
Decline to State	2%	0%
Proportion of students from underserved racial/ethnic groups	55%	51%

b)

<b>Gender Identities</b>	<b>Scientist Spotlight Homework Classes</b>	<b>Course Reader Homework Classes</b>
Female	58%	56%
Male	40%	44%
Transgender	1%	1%
Other	1 student declined to state and 1 student identified as "agender"	1 student declined to state and 1 student identified as "gender neutral"

Attitudes

Please share your opinions of the statements below. There are absolutely no right or wrong answers, and nothing would be better than to see a wide variety of ideas from different students in class. You will not be graded based on the way you answer any of these questions.

Presently, I am...

	Not at all	Just a little	Somewhat	A lot	A great deal
* Enthusiastic about this subject	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
* Interested in discussing this subject area with friends or family	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
* Interested in taking or planning to take additional classes in this subject	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
* Interested in pursuing a science career	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Confident that I understand this subject	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Confident that I can do this subject	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Comfortable working with complex ideas	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Willing to seek help from others (teacher, peers, TA) when working on academic problems	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

\*Items included in the "Science Interest" scale (see also Supp Mat Parts G-H)

## Background information...

**I have the profoundest appreciation and respect for your background, identity, and aspirations. Though the information below only gives a small glimpse into these aspects of your life, it is a helpful start to understanding who I will be serving this quarter and will help me ensure I serve all my students in an equitable manner.**

What best characterizes your major, past coursework, and career interests?

	Strongly Disagree	Disagree	Mildly Disagree	Mildly Agree	Agree	Strongly Agree
I am majoring or plan on majoring in Biology	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
I am majoring or plan on majoring in another Science or Math field	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
I am majoring or plan on majoring in a different subject	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
My major is undecided at this time	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
I am considering a career in a human health related field	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Regarding your past science classes...

	Yes	No
Is Bio 11 the first COLLEGE science class you've taken?	<input type="radio"/>	<input type="radio"/>
Is Bio 11 the first science class you've EVER taken at any level?	<input type="radio"/>	<input type="radio"/>

I identify as (choose all that apply)

- Female
- Male
- Transgender
- Decline to State
- Other (please specify)

I most closely identify as (choose all that apply)

- |   |  |
|---|--|
| <input type="checkbox"/> Black/African American       | <input type="checkbox"/> Laotian                         |

## Descriptive Statistics Listed by Hypothesis Number & Figure Number

### Hypothesis 1 (Descriptions of Scientists):

#### Treatment Effects On Use of Stereotypical Descriptions of Scientists

Group	Time	Raw Mean Percent Stereotypes Used	Raw Std. Error	Weighted Mean Percent Stereotypes Used	Weighted Std. Error
Course Reader Homework	Beginning of Course	67.173	3.972	67.384	4.079
	End of Course	63.191	3.585	18.312	2.973
Scientist Spotlight Homework	Beginning of Course	61.917	2.369	51.131	1.959
	End of Course	41.888	2.004	31.077	1.428

#### Treatment Effects On Use of Nonstereotypical Descriptions of Scientists (Fig. 1)

Group	Time	Raw Mean Percent Nonstereotypes Used	Raw Std. Error	Weighted Mean Percent Nonstereotypes Used	Weighted Std. Error
Course Reader Homework	Beginning of Course	13.496	2.186	43.771	2.836
	End of Course	9.346	2.924	41.925	1.471
Scientist Spotlight Homework	Beginning of Course	18.527	1.115	34.427	1.362
	End of Course	54.421	2.018	47.781	.706

### Hypothesis 2 (Relating to Scientists):

#### Treatment Effects On Ratings of Relatability to Scientists (Fig. 2)

Group	Time	Weighted Mean Level of Agreement w/Relatability Prompt	Std. Error
Course Reader Homework	Beginning of Course	1.926	.186
	End of Course	2.006	.100
Scientist Spotlight Homework	Beginning of Course	2.113	.168
	End of Course	2.987	.090

## Longitudinal Trends Regarding Hypotheses 1 and 2:

### Longitudinal Trends in Stereotypical Descriptions of Scientists Following Scientist Spotlights (Fig. 4a)

Time	Mean Percent Stereotypes Used	Std. Error
Beginning of Course	71.025	4.558
End of Course-test	46.920	4.548
6 Mos After Course	45.889	5.342

### Longitudinal Trends in Nonstereotypical Descriptions of Scientists Following Scientist Spotlights (Fig. 4b)

Time	Mean Percent Nonstereotypes Used	Std. Error
Beginning of Course	11.452	2.755
End of Course-test	50.989	4.528
6 Mos After Course	51.627	5.190

### Longitudinal Trends in Ratings of Scientist Relatability Following Scientist Spotlights (Fig. 4c)

Time	Mean Level of Agreement w/Relatability Prompt	Std. Error
Beginning of Course	1.846	.192
End of Course-test	3.000	.200
6 Mos After Course	3.000	.231

Hypothesis 3 (Science Interest):

**Changes in Stereotypical Descriptions of Scientists & Changes in Science Interest (Fig. 5a)**

Group	Time	Mean Science Interest	Std. Error
Students that Shifted to Use Fewer Stereotypes	Beginning of Course	3.312	.114
	End of Course	3.574	.092
Students that Did Not Shift to Use Fewer Stereotypes	Beginning of Course	3.591	.153
	End of Course	3.479	.123

**Changes in Nonstereotypical Descriptions of Scientists & Changes in Science Interest (Fig. 5b)**

Group	Time	Mean Science Interest	Std. Error
Students that Shifted to Use More Nonstereotypes	Beginning of Course	3.374	.068
	End of Course	3.607	.055
Students that Did Not Shift to Use More Nonstereotypes	Beginning of Course	3.528	.176
	End of Course	3.446	.141

**Changes in Ratings of Relating to Scientists & Changes in Science Interest**

Group	Time	Mean Science Interest	Std. Error
Students that Did Not Shift to Rate Scientists as More Relatable	Beginning of Course	3.485	.109
	End of Course	3.586	.087
Students that Shifted to Rate Scientists as More Relatable	Beginning of Course	3.287	.076
	End of Course	3.568	.061

Hypothesis 4 (Course Grades):

**Treatment & Course Grades (Fig. 6a)**

Group	Mean Course Grade	Std. Error
Course Reader Homework	2.236	.225
Scientist Spotlight Homework	2.863	.080

**Use of Nonstereotypes & Course Grades (Fig. 6b)**

Group	Mean Course Grade	Std. Error
Students that Did Not Shift to Use More Nonstereotypes	2.562	.172
Students that Shifted to Use More Nonstereotypes	3.052	.073

## ANCOVA Tables Following Quantitative Analyses

### Hypotheses 1 & 2

#### *Changes in Perception of Scientists from Pre-Test to Post-Test*

	<i>df</i>	<i>F</i>	$\eta$	<i>p</i>
Stereotypes	(1,311)	27.76	.08	< .001
Stereotypes x Condition	(1,311)	13.39	.04	< .001
Nonstereotypes	(1,311)	.69	< .01	.405
Nonstereotypes x Condition	(1,311)	16.51	.05	< .001
Relatability	(1,276)	.80	< .01	.373
Relatability x Condition	(1,276)	8.49	.03	.004

*Note:* All analyses conducted with gender, race (traditionally well- vs. under-served), and course section controlled as covariates.

### Hypothesis 1 & 2 (Longitudinal Trends)

#### *Longitudinal Changes in Perception of Scientists at 6mos*

	<i>df</i>	<i>F</i>	$\eta$	<i>p</i>
Stereotypes	(2,78)	4.36	.10	.016
Nonstereotypes	(2,80)	5.97	.13	.004
Relatability	(2,46)	2.63	.10	.083

*Note:* All analyses conducted with gender and race (traditionally well- vs. under-served) controlled as covariates.

### Hypothesis 3

#### *Shifts in Scientist Stereotypes, Interest in Science, and Interest in STEM Major*

	<i>df</i>	<i>F</i>	$\eta$	<i>p</i>
Science Interest x STEM Major	(1,216)	10.39	.05	.001
Science Interest x Stereotypes	(1,182)	4.46	.03	.036
Science Interest x Nonstereotypes	(1,182)	3.32	.02	.070
Science Interest x Relatability	(1,184)	2.10	.01	.149

*Note:* All analyses conducted with gender, race (traditionally well- vs. under-served), previous science experience, and course section controlled as covariates.

---

**Hypothesis 4***Shifts in Scientist Stereotypes, Relatability, and Grade*

---

	<i>df</i>	<i>F</i>	<i>η</i>	<i>p</i>
Treatment x Grade	(1,279)	6.682	.02	.018
Stereotypes x Grade	(1,211)	3.00	.01	.085
Nonstereotypes x Grade	(1,211)	6.68	.03	.010
Relatability x Grade	(1,171)	1.65	.02	.195

---

*Note:* All analyses conducted with gender, race (traditionally well- vs. under-served), course section, and previous college science experience controlled as covariates.

---

## Factor Analysis & Creation of the Science Interest Scale

The eight items adapted from the SALG (Seymour et al., 2000; Supp Materials Part D) were highly correlated, with nearly all  $r$ -values above .30 and  $p$ -values less than .001 (see table below for a complete list of item correlations). Despite the strong positive relationship between the majority of the items, a review of the questions suggested that there were two distinct constructs assessed by the scale, and that separating these out could provide additional insight into participants' experiences with the Scientist Spotlights. In order to clarify these relationships, reduce noise, and maximize the variance explained, we conducted a principal components factor analysis using a promax rotation. Seven of the eight items loaded on two factors, together explaining 55% of the variance and all with loadings over .6. Ultimately, this resulted in the subscale we titled "Science Interest" ( $\alpha = .831$ , see Supp Materials Part H for items and factor loadings). This subscale was used to calculate both beginning- and end-of-course Science Interest scores for each student.

Correlations Between Eight Modified SALG Items

	1	2	3	4	5	6	7	8
1. Enthusiastic about this subject	—							
2. Interested in discussing this subject area with friends or family	.653*	—						
3. Interested in taking or planning to take additional classes in this subject	.639*	.568*	—					
4. Interested in pursuing a science career	.479*	.408*	.692*	—				
5. Confident that I understand this subject	.439*	.396*	.443*	.365*	—			
6. Confident that I can do this subject	.359*	.314*	.309*	.203*	.671*	—		
7. Comfortable working with complex ideas	.360*	.385*	.324*	.234*	.562*	.678*	—	
8. Willing to seek help from others (teacher, peers, TA) when working on academic problems	.151	.237*	.115	.082	.100	.268*	.238*	—

Note: items marked \* are significant at  $p < .001$

### Quantitative Survey Items Constituting the “Science Interest” Scale

*Factor Loadings for From Principal Component Factor Analysis with Promax Rotation for the Adapted Student Assessment of their Learning Gains Questionnaire*

Item	Factor loading
Factor 1: Science Interest ( $\alpha = .83$ )	
3. Interested in taking or planning to take additional classes in this subject	.89
1. Enthusiastic about this subject	.77
4. Interested in pursuing a science career	.70
2. Interested in discussing this subject area with friends or family	.69
Factor 2: Science Confidence ( $\alpha = .84$ )	
6. Confident that I can do this subject	.92
7. Comfortable working with complex ideas	.76
5. Confident that I understand this subject	.72
Cross-Loaded Items (Dropped)	
8. Willing to seek help from others (teacher, peers, TA) when working on academic problems	.17/.27

*Note.* N = 267 and  $\alpha = .83$  for entire measure.

## Word Clouds Depicting Students' Descriptions of Scientists at Three Time Points

We created word clouds to visually represent students' descriptions of scientists using the tools at <http://www.wordle.net/>. Word clouds represent an increasingly popular tool for visualizing qualitative data (Henderson and Segal, 2013). They graphically represent word counts by showing more prevalent words in larger font sizes and less prevalent words in smaller font sizes. Though word clouds remove words from their contexts and can sometimes appear to overemphasize long words, they have the potential to serve as powerful tools in qualitative studies when the words are linked back to their original contexts through full quotations (Henderson and Segal, 2013). The following pages depict students' descriptions in essays from the beginning of the course, the end of the course, and 6 months after the course. These word clouds were generated using the lists of descriptions of scientists produced when quantifying students' responses to the stereotypes prompt.

Henderson, S., & Segal, E. H. (2013). Visualizing qualitative data in evaluation research. *New Directions for Evaluation*, 2013(139), 53-71.

Beginning of Course

End of Course

A word cloud visualization showing various terms and names associated with the course. The most prominent words, shown in the largest fonts, are "No One Type of Person", "All Types of People", "Do Experiments", "Go Against Stereotypes", "Interested in Work", "Passionate", "Creative", "Curious", and "Dedicated". Numerous smaller words and names are scattered throughout, including "From Small Towns", "Cowboys", "Find Truth", "Have Conviction", "Psychologists", "Confident", "Teachers", "Investigate Natural World", "Struggled Financially", "Especially Intelligent", "Overly Involved in Work", "Interested in Money", "Thumbi Ndungu", "Musicians", "Highly Educated", "Francis Crick", "Rosalind Franklin", "Transgendered", "Lawrence David", "Enthusiastic About Science", "Chemists", "Modest", "Mostly Men", "Make Mistakes", "Enjoy Learning", "Stubborn", "Make World Better", "Arrogant", "James Watson", "Darlene Cavalier", "Discover Things", "Not Initially Interested", "Cheerleaders", "Immunigrants", "Ben Barres", "Luis Miramontes", "Young and Old", "Work with Data", "Ready for Challenges", "Scientists", "Charles Limb", "Studios", "Carl Djerassi", "Steal Ideas", and "Carroll". The colors of the text range from dark blue/purple to dark red, with larger words in darker shades and smaller words in lighter shades.

No One Type of Person

Do Experiments

Go Against Stereotypes

All Types of People

Interested in Work

Passionate

Creative

Curious

Dedicated

From Small Towns

Cowboys

Find Truth

Have Conviction
